

Saving Lives Saving Life: Incorporation of Sustainability in Healthcare

Yelenny Argueta, Georgia State University, Pre-Nursing Student

The healthcare field is admired and well respected among all people of the world. It is respected and admired because the overall goal this field possesses, which is to heal and help the sick. This field is important as it makes this earth a better place. The incorporation of sustainability measures in healthcare would not only allow the citizens of this earth to continue to receive services, but also to aid in the goal of sustaining and saving the earth. Efforts made to engage the healthcare field would allow for there to be less waste product with no harm or change in the services this field provides. These sustainability efforts would also need to be incorporated in the manufacturers of those who provide the supplies to for the services done in healthcare. Data from recognized sources was analyzed. Results lead to major savings economically if healthcare and the manufacturers of supply used in healthcare incorporated sustainability measures, as many labs and some healthcare practices have done so to protect and sustain the environment and planet. This is important as it brings many people aiding and contributing to the common good of sustaining the earth and leaving a planet that it still viable for future generations.
